TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL.

Frontend: React 18, Vite, Tailwind CSS, Framer Motion, Context API, Responsive Design.

Backend & Database: Node.js, Express, PostgreSQL, MongoDB, Prisma ORM, RESTful APIs, GraphQL.

Tools & Cloud: AWS (CDK), Google Cloud Platform (GCP), Nginx, Git, GitHub, CI/CD, Figma.

PROFESSIONAL EXPERIENCE (SOFTWARE ENGINEERING)

Queued (Social Anime Platform)

Full Stack Software Engineer

08/2025 – Present
Haines City, FL

- Full-Stack Architecture & Data Reliability: Engineered a social anime platform using React 19, Node.js, and MongoDB, implementing a custom asynchronous retry loop and in-memory caching layer to handle third-party API rate limits and ensure 100% data availability for episode synopses.
- Complex Data Modeling & Social Graph: Designed and optimized a friend-suggestion algorithm using MongoDB aggregation pipelines to score user compatibility based on mutual friends and shared viewing history, executing filters at the database level to maintain high performance during scaling.
- Global Synchronization & UX: Developed a client-side timezone utility to dynamically convert ISO 8601 air-dates to local time for global users and implemented Optimistic UI updates for social interactions, achieving a zero-latency feel while maintaining state-consistency through API rollback strategies.

Beacon Hill Property Management:

Frontend Developer

12/2025 – 02/2026
Boston, MA

- Engineered a high-performance Single Page Application using React and TypeScript, leveraging the Intersection Observer API for fluid, scroll-triggered animations.
- Developed a custom-integrated lead generation form with automated email routing to streamline property inquiries and user engagement.

Synth Tree (LMS Platform)

Full Stack Engineer (Externship)

10/2025 – 12/2025
Haines City, FL

- Engineered a scalable Learning Management System using React, TypeScript, Node.js, and PostgreSQL to track student progress via interactive skill trees.
- Designed a type-safe GraphQL API and managed CI/CD workflows for automated deployment and infrastructure management on AWS.
- Developed reusable UI components in Storybook to ensure design consistency across the platform.

PROFESSIONAL EXPERIENCE (LEADERSHIP & MANAGEMENT)

Distribution Center Coordinator

NE Smoke Distribution

01/2023 – 12/2024
Nashua, NH

- Established a regional distribution center and architected a custom inventory management system to track thousands of SKUs.
- Streamlined supply chain logistics, reducing fulfillment delays and improving order accuracy.

Operations Manager

City Smoke Shop

01/2018 – 12/2024
Boston, MA

- Managed 5+ retail locations through virtual and in-person leadership, ensuring operational efficiency and compliance.
- Analyzed P&L reports to identify process optimizations, contributing to a 30% increase in financial growth.
- Scaled operations from 3 to 20+ retail locations across New England, managing high-stakes opening procedures and vendor logistics.

SOFTWARE ENGINEERING PROJECTS

What To Wear (WTWR) 🌐

Full Stack Developer

- Developed a production-ready weather-based clothing recommendation app using React, Node.js, and MongoDB.
- Integrated OpenWeatherMap API for real-time data fetching and implemented secure user authentication via JWT.
- Deployed the application on Google Cloud Platform (GCP) using Nginx reverse proxy and SSL/HTTPS for secure production access.

Spots 🌐

Frontend Developer

- Built a responsive photo-sharing application using Modular JavaScript and RESTful API integration.
- Implemented real-time interface updates for photo management (add/edit/delete) and interaction features like "likes".

EDUCATION

Software Engineering Program (740+ Hours)

TripleTen

06/2025 – 10/2025

- Intensive, project-based curriculum covering Full Stack development, Data Structures, and Algorithms.
